

(a) Planned sequence and archived starts**(b) Three-visit cadence realization****(c) Plan–actual start residual****(d) Archived observing conditions**

Historical near-Sun rows are the executed RA-prefix implementation: an initial solar-separation ordering was overwritten by RA sorting before prefix selection.

Planned-unacquired means only that no strict raw frame matched the planned (night, field) multiplicity; no weather or equipment cause is assigned. Missing condition tracks are marked 'not archived' and are not reconstructed from coordinates, site parameters, or a current ephemeris.
